DA3000 THINKING AND COMMUNICATING VISUALLY - FINAL PROJECT

Project Name: FloatTime Alarm Clock

Student Name: Nguyen Tuan Anh (U2120070G)

Instructor: Mr. Kenny Hong

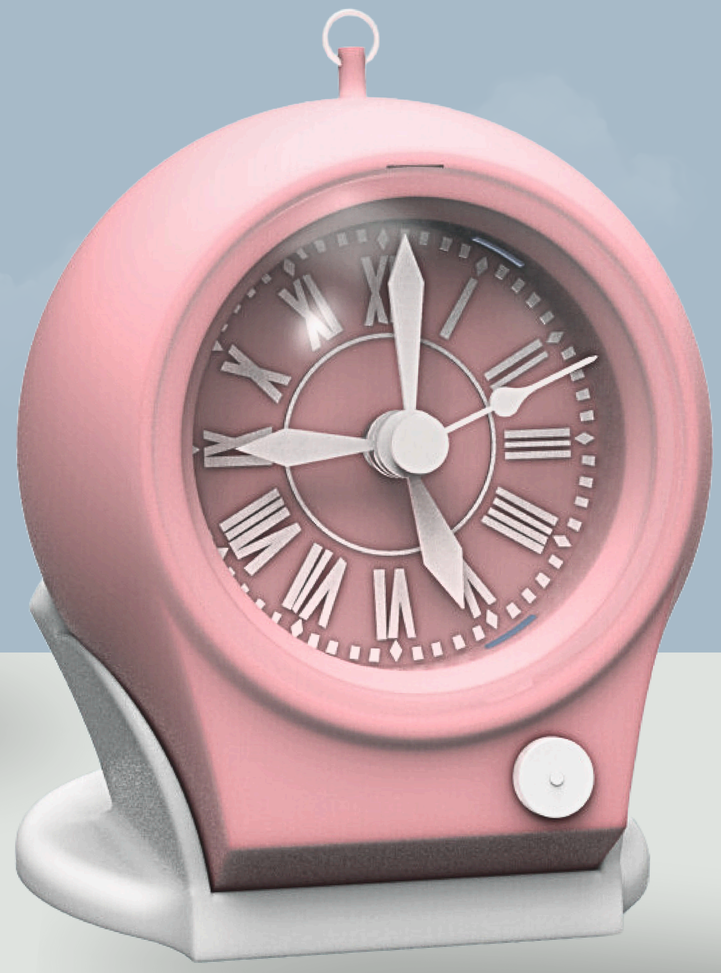
ACKNOWLEDGEMENT

I would like to extend my deepest gratitude to Mr. Kenny Hong for his invaluable guidance and support throughout this module. From the very beginning, I found the material challenging, yet with each consultation, your insights and encouragement gave me a clearer sense of purpose. Your ability to identify even the smallest areas for improvement and offer constructive feedback has helped me strive not just for completion, but for excellence.

Each meeting with you renewed my understanding of the subject and inspired me to aim higher. Your dedication to helping students, your resourcefulness, and your commitment to our growth have left a lasting impact on me. You have taught me the importance of clarity and purpose in every endeavor, and I am truly grateful for the patience and passion you bring to your teaching.

Additionally, I would like to acknowledge the significance of this module in fostering an environment that encourages creativity and practical design skills. The opportunity to utilize software to design new products has not only motivated me but also significantly contributed to my personal growth and technical development.

FLOAT TIME



The FloatTime clock combines playful charm with functionality, inspired by hot air balloons. Its angled face ensures easy readability, while the netted alarm arm adds a creative touch. With a dust-resistant finish and a simple button to stop the alarm, FloatTime brings style and imagination to any moment.
